The Oregon Health & Science University (OHSU) School of Medicine invites applications and
nominations for the position of Head of the Division of Pediatric Cardiology. It is a strong unit, essential
to the success of the medical school and integrated health system. The Division’s 14 pediatric
cardiologists have active research programs in congenital heart disease, specifically the fields of
echocardiography, genetics, and childhood dyslipidemia. The Division has developed an outstanding
clinical enterprise, delivering high-quality, complex care that leading academic health science centers are
capable of. Looking ahead, OHSU is committed to solidifying the Division’s preeminent status as a
provider of choice in the region as well as enhancing the research activity within the Division.

The next Head will take over during a period of remarkable success at OHSU—it is a moment of both
clinical expansion and investment in the basic sciences. Ranked as one of the nation's top 25 biomedical
research institutions, OHSU is a thriving academic health center that grown steadily in the last decade.
Since 2005, the University’s operating budget doubled to $2.4 billion, research award dollars grew by
$100 million to $376 million, and philanthropic gifts increased more than five fold to $300 million. The
University’s physical growth can be seen in a new collaborative life sciences building, an upcoming
School of Public Health, and a rural health-focused campus, as well as construction of three buildings to
be completed in 2018 including the Knight Cancer Institute research building, Center for Health &
Healing South, and the Rood Family Pavilion.

Reporting to the Chair of Pediatrics, the Head leads all the Division’s missions and sets its overarching
strategy. Additionally, they serve as a key leader in the pediatric and cardiac communities at OHSU. This
involves leading, organizing, and directing the academic, research, and business affairs of the Division
and representing Pediatric Cardiology in interactions with the University, Doernbecher Children’s
Hospital, Department of Pediatrics, School of Medicine, other departments, affiliate hospitals, donors, and
external constituents. OHSU will consider any outstanding MD, or MD/PhD clinician with a substantive
research record. S/he will think innovatively, collaborate and partner on multiple levels, with an
orientation focused on advancing the output and reputation of the Division. The successful candidate will
also have exceptional leadership qualities along with the vision to integrate and inspire the Pediatric
Cardiology Division, and the Department of Pediatrics more broadly.

All inquiries, nominations, and applications should be sent via Isaacson, Miller’s website:
